

Control Vehicle Mounted Weapons

How to Install ?

1. Create "mods" folder in the main directory of GTA5, copy and paste your "update" folder inside the one you just created. If you have done this already, you are good to go. You can now continue to the next step.
2. Download OpenIV from www.openiv.com , install it and open GTA V for Windows.
3. Click on "Tools" button in the upper ribbon, and select "Package Installer".
4. Navigate to the folder where you saved the mod and select the files one by one. You need to install each file separately. **ALL FILES NEED TO BE INSTALLED**
5. Click on the "Install" button. Select the "mods" folder install location. [remember to back-up your game files before installing the mod].
6. Close OpenIV and start the game!

NOTE: Make sure you have the latest version of ScriptHookV, otherwise the game will crash when you try to run it.
